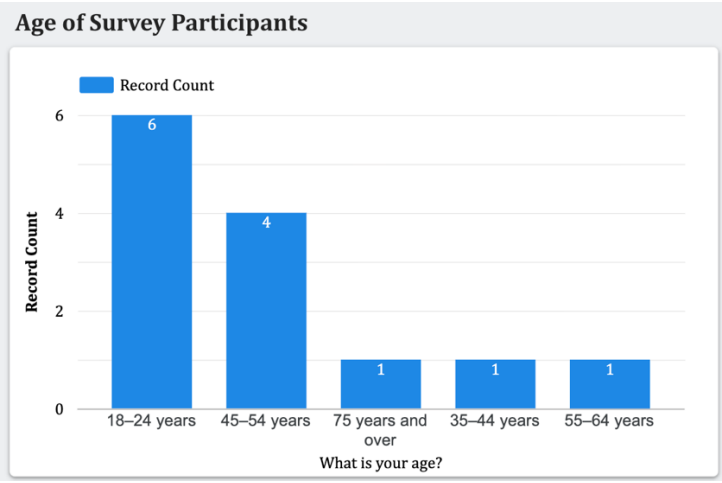
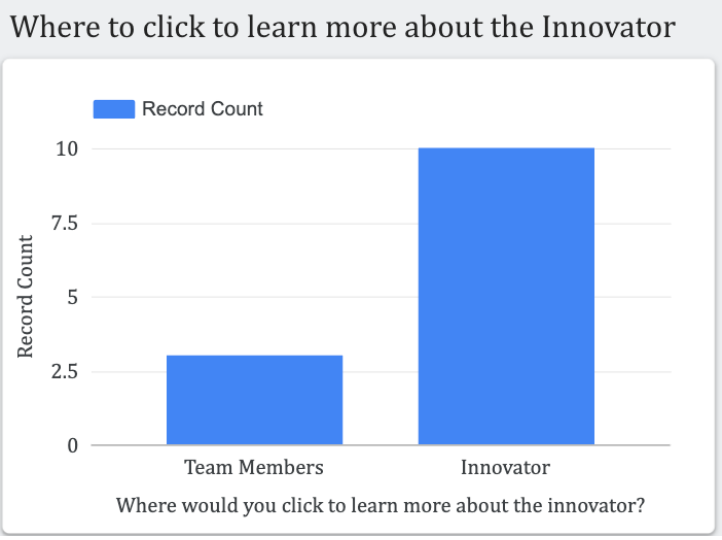
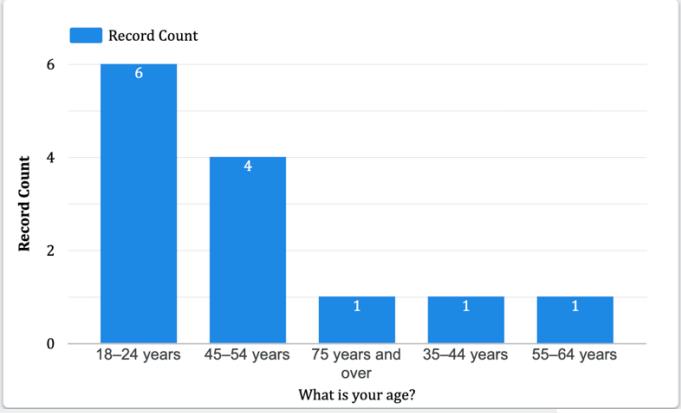
INFO I101
Caudell

We collected feedback and data through Google Surveys, as well as conducted interviews to assess how people interacted with our webpage and whether they found the information digestible and the design manageable. Fortunately, most of our feedback was positive; however, some individuals provided useful criticism on how we could improve our final website.





Age of Survey Participants



Gender of Survey Participants

What is most memorable about the Innovator

	What is most memorable about this inno…	Record Count
1.	Innovator's research contributed to the inventions of the touch-tone telephone, fiber-optic cables, caller ID, and call waiting.	1
2.	The caller id stuff	1
3.	the fact she was on the Nuclear Regulatory Commission	1
4.	The experience	1
5.	Studied at MIT	1
6.	She overcame so many struggles to active her goals	1
7.	That she was one of 2 women in her class. Thats surprising for this day and age.	1
8.	History at MIT	1
9.	Her early research in telecommunication like touch tone phone, caller ID and fiber optics has changed our lives and laid the groundwork for future advances in 6G network.	1
10.	Contributions	1
11.	The caller id thing	1
12.	She was the first black woman to go to MIT and also had phd	1

How could we improve our website

How could we improve our website or information about the innovator?	Record Count
“Home” page could have more information about what is this site about.	1
Website is impressive.	1
Website is easy to follow	1
Though the color scheme could be better	1
Maybe add more to the experience	1
Less words, more bullet points	1
It was very clear and informative	1
It is a very good website giving accurate information about the innovator an…	1
I thought the design could be slightly easier to navigate	1
I though it was great	1
Align colors	1
A screenshot of a Google Doc is difficult to read and was cut off. The link wo…	1

These are our data visualizations through surveys. As you can see we received suggestions on how to improve our website to be more manageable and user friendly. One of the most common notes of suggested improvement we received was making sure the pictures on our website are clearer. Through interviews we found that users find that the images are slightly distorted and needs to be scaled properly. As we work to improve our final website project we will be making sure that the website it less wordy, so people can digest the content better. Furthermore, from our interviews, we will be fixing the images to make the display of our website more approaching and pleasing. We believe by doing this it can allow for better user experience. Thirdly, we will be working to make the website more cohesive and consistent through patterns and colors. We found through feedback from both surveys and interviews that there needs to be a consistent tone to our website in order to make it more visually pleasing and easier to navigate.
